Good morning, as you can see in the screenshots that we relate, the admin panel that you show us is completely different from the one we have, we even just downloaded the code again and we checked but we did not find that, we also want to know how we are going to configure if the The code we have does not have the option nor does it relate to the TMDB. We have been working on this project for a long time and we have requested help from you. The response to the previous ticket #83 is not correct in our opinion since it is not possible to carry out the steps that we have. mentioned, we request that you please inform us clearly how we can solve our problem...... of ticket #83
